

Ultravation® UVP-7000

HEPA + UV Desktop Air Purifier

Imagine a **portable** purifier that cleanses the air of the smallest allergens, fine dust and dirt; removes bad odors and kills airborne bacteria and viruses.

The UVP-7000 offers the advanced filtration capability of **HEPA**, combined with **Activated Carbon** Odor Reduction, plus **UV-C** Air Disinfection.

Ultravation® UVP-7000 HEPA + UV Desktop / Portable Air Purifier

HEPA filtration with Activated Carbon

HEPA filters can efficiently capture much smaller particles than regular filters—as small as .3 microns! This means even very fine dust will be captured along with 99% of pollen and other particles that are also larger in size. The filter’s circular design provides 360° intake of air and the largest filter surface area possible for an air purifier this size.

Activated Carbon

Odors are adsorbed by the activated carbon layer in the filter. This serves to give the air a new freshness and relief from the accumulation of household odors.

Activated carbon is well known for adsorbing odors. Integrated with the filter, the carbon is renewed with each filter change.

Germicidal UV Light

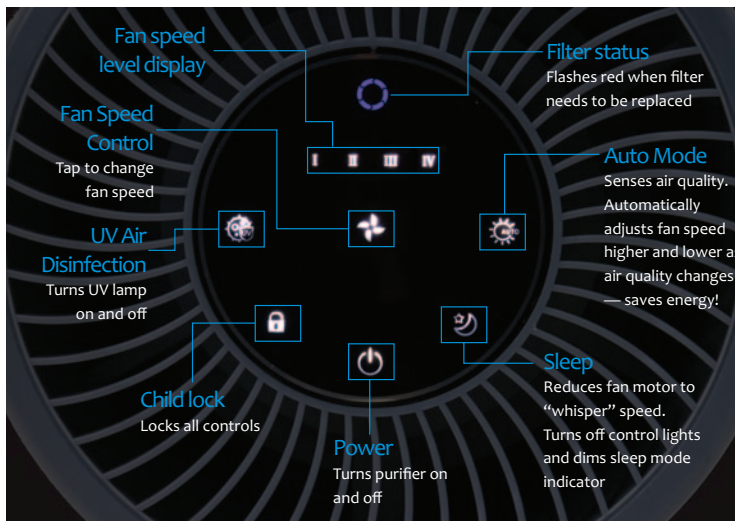

UV-C light has been in use for its germicidal properties since the 1930s. UV-C light will penetrate a microbe’s membrane and disrupt its DNA, rendering it unable to reproduce and effectively harmless. Airborne germs are exposed to the purifier’s 285nm UV light with every pass through the filter significantly reducing their numbers.

Air Quality Display (Auto Mode)

When in “Auto Mode” the system senses air quality. It will adjust the fan speed to higher levels when air quality is low and lower speeds when less purification is needed. Helps keep your air quality optimized while saving energy!

5-Speed fan, Sleep mode, Auto mode and more...

Model	Description	Operating Voltage	Color	Dimensions	Replacement Filter Part
UVP-7000	Portable HEPA + UV Purifier	110-120 vac	White	8.5 x 8.5 x 13.5	91-200
